outdoors**

Reducing carbon emissions is a business imperative

This is the first climate report for Pinewood AB. The year 2024 has been selected as the base year for the company's climate reporting. The purpose of the reporting is to increase the understanding of what is driving the company's greenhouse gas emissions, set targets to reduce them on the journey towards net-zero. This climate report has been developed in accordance with the GHG protocol corporate standard and

covers Pinewood's scope 1 and scope 2 emissions for the year 2024. The GHG protocol defines emissions into three scopes, scope 1, scope 2 and scope 3. Total greenhouse gas emissions are quantified in carbon dioxide equivalents (CO₂e), wich takes into consideration that different greenhouse gases have different global warming factors. The emissions factors come from DEFRA and GHG, supplemented with specific emissions factors when significant.

Scope 1 - Direct

Scope 1 emissions are direct emissions from company-owned and controlled resources. Scope 1 includes the emissions that occur directly in the company's own operations.

Total Scope 1 CO ₂ e emissions (tonnes)
17,8

Scope 2 - Indirect

Scope 2 includes indirect emissions from the production of purchased electricity that are consumed by us.

Total Scope 2 CO ₂ e emissions (tonnes) market-based
0

Upstream activities

Scope 3 - Indirect

Scope 3 includes all other indirect emissions that occur in a company's value chain but which the company does not own or control. Scope 3 is voluntary to report in and it is in scope 3 that it becomes very difficult for many companies to get a comprehensive picture. We have not started to measure our emissions in scope 3 yet.
