San Clemente Temperature History 2024

San Clemente Temperature History 2023

ETHoWork home offices experienced a 4% increase in total electricity usage in 2024 vs. 2023. We attribute this to air conditioning usage during a particularly hot September, 2024 in both of our areas with temperatures over 32 degrees celsius. Our home offices are 10 miles apart and both areas experienced this September heat wave. Natural gas usage (heating) remained flat 2024 vs. 2023. Despite increased trips to our clients' businesses in 2024, we drove 4% less miles in 2024 vs. 2023, as we made a concentrated effort to carpool to our business engagements. See distances driven in tab three "2023+2024 Mileage Totals."
