NET ZERO COMMITMENT

NET ZERO BY 2030

42% EMISSIONS REDUCTION TARGET BY 2030

At Boo Consulting, we believe organisations should understand their environmental impact in the same way they understand financial, security and compliance risks.

As a small consultancy, our emissions footprint is relatively low, but we recognise that every organisation has a responsibility to improve. This report explains our commitment to achieving Net Zero emissions by 2030, the actions we are taking today and how we intend to continue reducing our environmental impact over time.

OUR COMMITMENT

Boo Consulting is committed to achieving Net Zero greenhouse gas emissions across Scope 1, Scope 2 and Scope 3 emissions by 2030, aligned to SME Climate Hub and SBTi principles.

Climate responsibility is becoming an expectation across supply chains, procurement processes and client partnerships.

Many organisations now want assurance that the businesses they work with are measuring their emissions and taking practical action to reduce them.

Our approach is straightforward. We want to understand our impact, reduce it wherever possible and be transparent about both our progress and our challenges.

We see climate responsibility as part of good governance rather than a separate initiative.

WHO WE ARE

A four-person consultancy specialising in privacy, information security, governance and ISO management services. Our delivery model is digital-first, cloud-enabled and remote by design.

Boo Consulting is an independent consultancy specialising in privacy, information security, governance and management system standards including ISO 27001 and ISO 14001.

We are a small team of four people and operate primarily through digital platforms and remote collaboration.

This operating model naturally reduces many of the emissions associated with larger organisations, such as extensive office space and frequent travel.

However, we recognise that technology, suppliers and business travel still contribute to our environmental footprint and must be managed responsibly.

BASELINE EMISSIONS

1 **TOTAL EMISSIONS**
6.75 tCO₂e

2 **SCOPE 3**
6.05 tCO₂e

3 **SCOPE 2**
0.70 tCO₂e

4 **PRIMARY SOURCES**
Purchased services, capital goods, travel and homeworking.

NEAR-TERM TARGET

**REDUCE ABSOLUTE SCOPE 1, 2 AND 3 EMISSIONS BY
42% BY 2030 AGAINST THE 2024 BASELINE.**

We have committed to two linked goals:

1. To achieve Net Zero greenhouse gas emissions across Scope 1, Scope 2 and Scope 3 emissions by 2030.
2. Our near-term science-based target to reduce our emissions by 42 per cent by 2030 against our 2024 baseline.

Our priority is to reduce emissions through genuine operational improvements rather than relying on offsetting.

By setting a measurable target, we can monitor progress and demonstrate accountability to clients and stakeholders.

HOW WE WILL REDUCE EMISSIONS

Our reduction strategy focuses on practical actions that are proportionate to the size of our business:

- We continue to keep our energy use as low as possible.
- We extend the lifespan of equipment through maintenance, repair and reuse.
- We prioritise remote working and remote service delivery where appropriate.
- When travel is necessary, we favour lower-carbon options wherever practical.
- We also engage suppliers and encourage better environmental performance throughout our value chain.

Together, these actions help us steadily reduce emissions while maintaining high-quality services for our clients.

NET ZERO STRATEGY

Our priority is reduction, not offsetting. Any residual emissions that remain technically infeasible to eliminate by 2030 will be neutralised through verified carbon removals.

Our Climate Action Plan turns our commitments into day-to-day activities.

The plan covers office energy management, responsible purchasing, travel reduction, supplier engagement, waste reduction and equipment lifecycle management.

Many of these measures are already in place and are reviewed annually to ensure they remain effective.

The intention is not to create unnecessary complexity, but to identify practical actions that can deliver measurable improvements over time

RESPONSIBLE GOVERNANCE

Our climate commitment reflects the same values that underpin the rest of our business.

Accessibility means making sustainability easy to understand.

Accountability means taking responsibility for our decisions and our impact.

Simplicity means focusing on actions that make a genuine difference.

Sustainability means considering the long-term impact of the choices we make.

These values shape how we work with clients, suppliers and each other.

They also provide the framework for our continual improvement approach

WORKING WITH OUR CLIENTS

We believe sustainability should be practical, transparent and proportionate. Our aim is to reduce our own impact while helping clients strengthen governance, resilience and long-term sustainability.

OUR COMMITMENT ROUND UP

To conclude, our commitment is simple.

- We will continue measuring our emissions.
- We will continue reducing our environmental impact where practical and achievable.
- We will continue reviewing our progress and looking for opportunities to improve.
- Most importantly, we will remain transparent about our journey.

As a small consultancy, we may not have the largest footprint, but we believe every organisation can contribute to positive change through responsible decisions, continual improvement and a willingness to act.

Thank you for taking the time to review our Climate Commitment Report.
